Acknowledgments

It was my work on the Math issue of *The Change Agent* that tuned me in to the rich interdisciplinary nature of math and ELA work. Thanks to the editorial board of the Math Issue for support, wisdom, and new insights!

Editorial board (from left): Connie Rivera (SABES), Betsy Alvelo (student at Hartford’s HOME program), Delvin Beasley (community activist), Sarah Lonberg-Lew (SABES), Andy Nash (NELRC), Ebony Vandross (World Education), Cynthia Peters (Change Agent Editor), inset (from top): Cynthia Bell (Literacy Assistance Center, NYC), Donna Curry (SABES), Saëoka Harris (teacher at the Bronx Adult Learning Center, NYC), Heidi Schuler-Jones (SABES).
Many Ways to Say It!

Sylvia has 3 siblings. Dana has 6 siblings. Mario has 1 sibling.

Write two statements comparing the number of siblings that Sylvia, Dana, and Mario have. Use phrases like: more than, less than, twice as many, half as many, etc. Check with your classmates. How many different ways can you express the relationship between the number of siblings that they each have? Draw a picture to help you see the relationships.

Sylvia - ⭐⭐⭐
Dana - ⭐⭐⭐⭐⭐⭐⭐
Mario - ⭐
One Way to do this in the Classroom:

• Post the problem on large pieces of newsprint around the room.
  – Sylvia and Dana
  – Sylvia and Mario
  – Mario and Dana
  – All three

• Students divide into groups and add statements to sheets.

• After everyone has added to all sheets, gallery walk.
Help me, Mom!

Abir Yousef

BEFORE YOU READ: What English words are helpful when you are doing math “in English”?

When I was a small girl, I said, “Mom, please help me with my math homework.” I didn’t have anyone to help me. She cried because she didn’t go to school when she was a girl. This was so hard for me. I practiced by myself for a long time. I feel I am strong in life. Math is important. I did well in math. I remember my teacher in school told me, “In the future, you must study to be an engineer.”

My children like math and they do well too. Sometimes they tell me, “Mom, please help us.” But I feel sad because it is hard to help them. I need more English. When my children were small, I could teach them math. As they’ve gotten older, some of the problems are too hard. Sometimes, it takes me one hour to find the right answer. Now I learn English to help me in math also. I use math all the time in my life. I like math. I want to find a job very fast and math will help.

Abir Yousef is a student at the IRIS Mother & Child ESOL Program in New Haven, CT. She is from Syria, where she studied psychology at Damascus University. When she went to Jordan, she worked for the International Rescue Committee helping refugees. Now she wants to study to be an ultrasound technician in the USA and work part-time because she has seven children.

AFTER YOU READ: Think of more ways of expressing the math problems in the box below (left). Try using phrases like “more than” and “less than.”
In this workshop, you will:

1. Consider some of the merits of interdisciplinary learning.

2. Learn the interdisciplinary nature of some math and ELA practices (derived from the CCR standards).

3. See modeled and experiment with lesson activities that simultaneously build math and language skills.
Why an Interdisciplinary Approach?

It helps students develop the ability to transfer skills and knowledge:

• How can I solve this?
• Practice recognizing patterns.
• Experience success using strategies.

Comparison Shopping Requires Math!

Brand name tablets, 200 mg each, 100 tablets per box.  
Brand name “liqui-gels,” 200 mg each, 40 “liqui-gels” per box.  
CVS brand tablets, 200 mg each, 200 tablets per box.

What math do you have to do to figure out the product that is best for you?

If you shop for the cheapest price per box, which one would you choose? If you shop for cheapest unit cost (price per pill), which would you choose?

What else do you have to take into account? For example, maybe “liqui-gels” are easier to swallow, so it may be worth paying more for them. Also, is it always economical to get more tablets for a cheaper unit cost? Explain.
Using Math to Start a Poultry Farm

Mustafa

BEFORE YOU READ:

1. What is poultry? Read the definition below and use it in several sentences. Learn the words cost, revenue, and profit.

2. What math do you think a person might need to be able to start a poultry farm?

When I first came to the United States, I spent a lot of time with my uncle, who has a good mind for business. We discussed different ideas, and I kept a small notepad with me where I gathered information. He was glad that I was thinking about opening my own business. He started asking me questions about my plans. I told him that I wanted to start a small organic poultry farm of 500 chickens.

The chickens would need space to roam freely and receive sunshine, so it was important for me to think about how many square yards I would need to help me replace a fence. It took 59 hours to finish the work. When we were done, I paid him $1,062 for his hard work, which is $18 per-hour.

It was a great feeling to make the property ready. My next job was to buy the chickens and everything they would need. I bought 100 bags of chicken feed at $35 per bag. I bought PVC pipes to use as chicken feeders which cost $400. I installed a $900 solar panel and many other things. And finally, I bought the 500 chickens, which cost about
After you read…

1. How did Mustafa arrive at the total of $14,000 to start the poultry farm? Which of the expenses were one-time expenses and which are repeating?

2. How much money does he earn from the farm in five months? How much does it cost him to run the farm for five months? … Make a spreadsheet to show your work.

3. What reasonable changes could he make to bring in more revenue in less time? Show the changes in your spreadsheet.
Excel spreadsheet + other worksheets (in Word) are available to download and adapt at changeagent.nelrc.org/in-the-classroom/lesson-packets/
In the grid above, each square is equal to one square yard. What is the total square yardage? How did you figure it out? How could you design the space given the dimensions of Mustafa’s indoor chicken coop and outdoor yard?

A full-page copy of this grid available to download at: changeagent.nelrc.org/in-the-classroom/lesson-packets/
This and other solutions available on our website.

Write a letter to Mustafa

Template:

Name
Address
City, State, Zip

Salutation,

Indented body paragraph #1 – should include a few sentences. In the first paragraph you should introduce yourself and say why you are writing.

Indented body paragraph #2 – should include a few sentences. The second paragraph should include more substance and details about why you are writing.

Indented body paragraph #3 – should include a few sentences. The third paragraph should conclude the letter and perhaps say something about next steps if appropriate.

Sincerely,

[your signature here]

Dear Mustafa,

I am the editor of The Change Agent, and it was a pleasure to include your very interesting article in our Math issue. I am writing now to give you some advice. Granted, I know almost nothing about poultry farming, but I have some advice for you anyway: look for another career!

Being a poultry farmer seems like very hard work, and after reading your article, I can’t tell if you even get paid for your labor. I did some research, and I found out that predators are a real problem. I know you and your friend built a fence, but I bet you still have to worry about hawks and foxes and snakes getting into your chicken coop. Also, you might get attached to some of the chickens, but then you have to send them to a slaughterhouse! Yuck!

I know there is probably a good side to it, too. For example, you get to be your own boss. You seem like a smart and thoughtful person. But after reading your article and doing some research, I would advise you to sell the farm and find another kind of work!

Sincerely,

Cynthia
